FarmSense

Fund the Validation Event. Grants Do the Rest.

\$100K	\$1.5M+	15x
SEED TARGET	GRANT RUNWAY	LEVERAGE RATIO

Grants Build. Investment Validates.

Zero-Dilution Infrastructure + Equity Validation Event

FarmSense uses grants (Federal ESG, NSF SBIR, CWCB, BoR) to fund all R&D, hardware, and software. Investment covers only the 2-field pilot at CSU SLV RC — the validation event that unlocks grant scaling.

NON-DILUTIVE

\$1.5M+

Federal ESG (DoD Dual-Use)	\$500K – \$2M
CWCB Water Plan Grant	\$500K – \$2M
NSF SBIR Phase I	\$275K
BoR WaterSMART	\$300K

Covers: Hardware BOM, software dev, patents (29+), infrastructure, scaling to 1,280 fields

SEED ROUND

\$100K

- → CSU SLV RC Pilot Operations
- → 2-Field Validation (Center, CO)
- → Academic Partnership Costs
- → Water Court Evidence Prep
- → Personnel & Logistics

Unlocks: Empirical proof → Grant drawdown → 1,280-field rollout

The \$500/AF Problem Meets Legal-Grade Precision

The Crisis

- → Colorado San Luis Valley: 89,000 AF/year aquifer depletion
- → \$500/acre-foot pumping fee = 4x previous costs
- → Farmers face existential threat without data defense
- → Water Court requires empirical proof

The Solution

- → Deterministic OS: Rule-based, explainable logic
- → Digital Water Ledger: Court-admissible, signed
- → 50m→1m resolution tiers
- → 20-30% water reduction = \$25K/year savings per pivot

The Opportunity

- → Subdistrict 1: 1,280 pivots, \$7.6M ARR at scale
- → \$1.5M+ grant runway (non-dilutive)
- → \$100K investment → validation → scale
- → 5% global cropland = 15M hectares

TARGET (5%) · \$11.1B TAM

The Subsidized Penetration Model

Governments provide **free 50m baseline** to ensure 100% enrollment. Enterprise tiers (1m legal-grade) cross-subsidize free tier. DoD dual-use adds defense revenue stream.

EXPANSION PHASE	TIMELINE	FIELDS	REVENUE
Subdistrict 1 (Colorado)	2026-2027	1,280	\$7.6M ARR
Colorado Statewide	2027-2028	~50,000	~\$150M ARR
High Plains Aquifer	2028-2029	~200,000	~\$600M ARR
5% Global Target	2029+	~15M ha	\$11.1B TAM
