🎯 Water Court Trial: June 29, 2026 · CSU Pilot Active

The $500/AF Existential Crisis

The Hydro-Economic Emergency

San Luis Valley, Colorado

89,000 acre-feet/year aquifer depletion. Reservoirs at 26% capacity. $500/acre-foot pumping fee — a 4x increase that threatens farm viability.

- → 300,000 acres irrigated agriculture at risk
- → 1,280 center-pivot fields in Subdistrict 1 alone
- → 1938 Rio Grande Compact compliance mandates
- → State Water Court requires empirical proof, not estimates

The Existing "Solutions" Fail

- → **Satellite-only:** 10-30m resolution, 3-5 day latency, no ground truth
- → **AI black-boxes:** Court-inadmissible, unexplainable decisions
- → **Manual monitoring:** Labor-intensive, inconsistent, non-auditable
- → **Expensive precision Ag:** $50K+ per field, prohibitive at scale

The Stakes

$25,200

ANNUAL SAVINGS PER 126-ACRE PIVOT AT 20% REDUCTION

$7.6M

ARR POTENTIAL IN SUBDISTRICT 1 ALONE

$810M

GLOBAL 5% HARDWARE REQUIREMENT

The Digital Water Ledger

Deterministic, Not AI

- → Rule-based, explainable logic — not black-box ML
- → Every decision auditable and defensible in court
- → 11 domain-specific engines for SPAC modeling
- → Continuous Cost-Benefit Analysis (CBA) per irrigation event

Cryptographic Chain of Custody

- → AES-256 encrypted "Audit Packets" at edge
- → 30-day "Black Box" cache for legal defensibility
- → AllianceChain PBFT blockchain for water trading
- → Immutable record for Water Court evidence

Resolution Tiers

Free → Enterprise Upsell

50m (free) → 20m ($49/mo) → 10m ($199/mo) → 1m (Enterprise). The "Resolution Pop" UI converts technical curiosity into immediate upgrades during high-stress events.

- → 20-30% water reduction validated
- → 18-22% ROI increase for farmers
- → <5% Kriging error vs ground truth

29+ Patents · Deterministic Architecture · Dual-Use Ready

29+	11	AES-256	<5%
Patents Filed	Domain Engines	Edge Encryption	Kriging Error

Hardware Stack (Our Own)

- → LRZ: Lateral Root-Zone Scout ($54 OEM)
- → VFA: Vertical Field Anchor (48" deep truth)
- → PMT: Pivot Motion Tracker (edge compute hub)
- → PFA: Pressure & Flow Anchor (wellhead actuator)
- → DHU/RSS: District/Regional mesh managers

Decentralized Resilience

- → Own cloud — not AWS/Azure dependent
- → 900MHz FHSS LoRa Mesh (LPI/LPD for DoD)
- → Offline operation during backhaul failures
- → JADC2 adapter for tactical trafficability

Competitive Moat

- → Patent portfolio blocks copycats
- → Water Court validation = regulatory capture
- → Hardware BOM 60% below competitors
- → Grant-funded scale vs VC-diluted growth

Pilot Deployed · Partnerships Active · Trial Date Set

CSU San Luis Valley Pilot

- → 2 fields instrumented at CSU Research Center
- → 2 PMTs, 2 PFAs, 2 VFAs, 16-20 LRZs deployed
- → Live data flowing to validation dashboard
- → Academic rigor for peer-reviewed publication

Validation Target

<5% Kriging error vs physical VFA truth nodes. This empirical evidence unlocks Federal ESG grant drawdown.

Strategic Milestones

MILESTONE	DATE	STATUS
Hardware BOM Finalized	March 2026	✅ Complete
CSU Pilot Deployment	April 2026	🔄 In Progress
Federal ESG Submission	March 26	🔄 Drafting
Water Court Trial	June 29	⏳ Scheduled
NSF SBIR Phase I	Q2 2026	⏳ Targeted

Partnerships

- → **CSU SLV Research Center:** Academic validation
- → **Rio Grande Water Conservation District:** Regulatory alignment
- → **Colorado Dept of Water Resources:** Compliance pathway
- → **DoD ESTCP:** Dual-use validation pipeline

$25K Minimum to Launch · $100K for 5% Equity

Investment Structure

- → Pre-money valuation: $2M
- → Minimum to start pilot: $25K (pro-rated equity)
- → Full target: $100K = up to 5% equity
- → Use of funds: CSU SLV RC pilot operations only

Grant Coverage

- → Federal ESG: $500K-$2M (hardware/software)
- → NSF SBIR Phase I: $275K (R&D)
- → CWCB Water Plan: $500K-$2M (expansion)
- → BoR WaterSMART: $300K (resilience)

Capital Efficiency

- → 15x leverage: $100K unlocks $1.5M+ grants
- → Investors fund validation, grants fund scale
- → No dilution for R&D or infrastructure
- → Pilot success unlocks Federal ESG drawdown

The "Resolution Pop" · $1.11B ARR at 5% Global Scale

How We Get to $1.11B ARR

5% global irrigated cropland (37M acres) × $30/acre Enterprise tier = $1.11B annual recurring revenue. Free tier ensures 100% market capture; Enterprise tier monetizes high-stress legal requirements.

TIER	RESOLUTION	PRICE	TARGET	CONVERSION TRIGGER
Free	50m	$0	Government baseline	100% participation
Basic	20m	$49/mo	Small family farmers	Initial optimization
Pro	10m	$199/mo	Commercial Ag / VRI	Daily actuation
Enterprise	1m	$30/acre	Legal / ESG / Trade	Water Court evidence

$7.6M
ARR SUBDISTRICT 1 (1,280 PIVOTS)

$117M
ARR 5% GLOBAL (37M ACRES)

$1.11B
ARR 5% AT ENTERPRISE SCALE

87%
GROSS MARGIN AT SCALE

5% of Global Irrigated Cropland = Sovereign Infrastructure

The 5% Target

300M hectares global irrigated cropland × 5% = 15M hectares (37M acres). At 126 acres per pivot, this requires 294,167 center-pivot instrumentations. Hardware CAPEX: $810M. Grant-funded over 5-7 years.

294K	2.47M	2,942	147
PMT UNITS	LRZ UNITS	DISTRICT HUBS	SUPERSTATIONS

HARDWARE COMPONENT	UNITS	UNIT COST	TOTAL CAPEX
PMT (Pivot Motion Tracker)	294,167	$1,112	$327M
LRZ (Lateral Root-Zone Scout)	2,471,000	$54	$134M
PFA (Pressure & Flow Anchor)	294,167	$850	$250M
VFA (Vertical Field Anchor)	294,167	$158	$47M
DHU + RSS Infrastructure	3,089	—	$52M
TOTAL HARDWARE CAPEX			**$810M**

Why FarmSense Wins

CropX / Farmers Edge

Satellite-Only

10-30m resolution, no ground truth. AI black-box decisions. Not court-admissible.

❌ No legal defensibility

Prospera / Arable

Expensive Hardware

$50K+ per field. Prohibitive at scale. No subsidized deployment model.

❌ Unit economics fail at scale

FarmSense

Deterministic + Legal

Subsidized hardware, $50 LRZ target. Court-admissible evidence. Patent moat.

✅ Regulatory capture path

The Winner-Take-All Dynamic

Water Court validation creates a natural monopoly. Once FarmSense becomes the "presumed compliant" standard in Colorado (June 2026), competitors must achieve equivalent legal standing — a 3-5 year patent and validation gap they cannot close.

Builders · Operators · Domain Experts

JW

Jeremy White

CEO & Founder

Systems architect, water rights strategist, grant pipeline execution. Bxthre3 Inc founder.

JM

Johnathon Moore

CTO & Co-Founder

Hardware engineering, RF systems, edge compute architecture. 29-patent portfolio lead.

FM

Fabian Martinez

Chief Agronomist

SPAC modeling, soil-plant-atmosphere continuum expertise. CSU partnership lead.

Advisory Network

Colorado Water Court veterans · DoD ESTCP program officers · CSU hydrology faculty · Gates Foundation climate adaptation advisors · World Bank trans-boundary water treaty negotiators.

$100K Funds Pilot Execution — Grants Cover Everything Else

Pilot Budget: CSU San Luis Valley Research Center

CSU SLV RC Operations (personnel, logistics)	$45K
Academic Partnership & Data Validation	$25K
Legal Prep & Water Court Evidence	$20K
Contingency	$10K

Hardware Covered by Grants

2 PMTs, 2 PFAs, 2 VFAs, 16-20 LRZs ($12.5K BOM) — covered by Federal ESG. Investors fund operational validation, not hardware procurement.

Pilot Milestones

- → Deploy: April 2026
- → Validate: <5% Kriging error
- → Water Court: June 29, 2026
- → Unlock Federal ESG drawdown

$1.5M+

Grant runway unlocked by pilot success

$25K Minimum · $100K Target

Fund the validation event that unlocks $1.5M+ in grants.
Grants cover $810M hardware scale. Investors capture 5% of $1.11B ARR potential.
